Executive Summary

This database is designed to store information about cameras, lenses, memory cards, printers, printer paper, and printer ink. It will include information such as brands, models, sizes, lengths, retail prices, etc. Users could use this database to find out what cameras and lenses work together, which printers and paper work together, and which printers and ink work together. Users could also use the database to find the cost of these items either separately or together. Every time a new camera, lens, printer, etc is released it can be added to the database with all of its identifiers. This document will include not only the database, but also specific views, procedures, and triggers that will help the user find important information.

Table Create Statements

Cameras Table

The Cameras Table stores information about different camera brands and models. It has six unique fields, including brand, model, pixels, autofocus, mountType, and retailPriceUSD.

Functional Dependencies

CID → brand, model, pixels, autofocus, mountType, retailPriceUSD

SQL Create Statement

```
DROP TABLE IF EXISTS cameras;  
CREATE TABLE cameras (  
  CID          varchar(14) not null,  
  brand        text,  
  model        text,  
  pixels       numeric (3,1),  
  autofocus    varchar(3),  
  mountType    text,  
  retailPriceUSD money,  
  primary key (CID)  
);
```

Cameras Table Sample Data

Lenses Table

The lenses table stores information about different lens brands and models. It has eight unique fields including brand, focalLengthMM, apertureMinFStop, apertureMaxFStop, autofocus, mountType, lensType, and retailPriceUSD.

Functional Dependencies

LID → brand, focalLengthMM, apertureMinFStop, apertureMaxFStop, autofocus, mountType, lensType, retailPriceUSD

SQL Create Statement

```
DROP TABLE IF EXISTS lenses;
CREATE TABLE lenses (
  LID          varchar(14) not null,
  brand        text,
  focalLengthMM varchar(9),
  apertureMinFStop numeric (3,1),
  apertureMaxFStop numeric (2,1),
  autofocus    varchar(3),
  mountType    text,
  lensType     text,
  retailPriceUSD money,
  primary key (LID)
);
```

Lenses Table Sample Data

lid character varying(14)	brand text	focallengthmm character varying(9)	apertureminfstoph numeric(3,1)	aperturemaxfstoph numeric(2,1)	autofocus character varying(3)	mounttype text	lenstype text	retailpriceusd money
2751B002	Canon	70-200	32.0	2.8	Yes	Canon EF	Telephoto	\$2,499.00

Cards Table

The Cards table stores information about SD Card brands and sizes. It has six unique fields including brand, capacityGB, cardType, readSpeedMBPS, writeSpeedMBPS, and retailPriceUSD.

Functional Dependencies

SDID → brand, capacityGB, cardType, readSpeedMBPS, writeSpeedMBPS, retailPriceUSD

SQL Create Statement

```
DROP TABLE IF EXISTS cards;
CREATE TABLE cards (
SDID          varchar(14) not null,
brand         text,
capacityGB    int,
cardType      text,
readSpeedMBPS int,
writeSpeedMBPS int,
retailPriceUSD money,
primary key (SDID)
);
```

Printers Table

The Printers table stores information about different printer brands and models. It has six unique fields including brand, capacityGB, cardType, readSpeedMBPS, writeSpeedMBPS, and retailPriceUSD.

Functional Dependencies

PRID → brand, model, printerType, dotsPerInch, printSpeedSeconds, retailPriceUSD

SQL Create Statements

```
DROP TABLE IF EXISTS printers;  
CREATE TABLE printers (  
  PRID                varchar(14) not null,  
  brand               text,

Paper Table

The Paper table stores information about different paper brands and sizes. It has six unique fields including brand, sizeInches, thicknessMM, surfaceFinish, quantity, and retailPriceUSD.

Functional Dependencies

PID → brand, sizeInches, thicknessMM, surfaceFinish, quantity, retailPriceUSD

SQL Create Statements

```
DROP TABLE IF EXISTS paper;  
CREATE TABLE paper (  
  PID                varchar(14) not null,  
  brand              text,  
  sizeInches         text,  
  thicknessMM        int,

Ink Table

The Ink table stores information about different ink brands, numbers, and colors. It has four unique fields including brand, inkNumber, and retailPriceUSD.

Functional Dependencies

IID → brand, inkNumber, color, retailPriceUSD

SQL Create Statements

```
DROP TABLE IF EXISTS ink;  
CREATE TABLE ink (  
  IID                varchar(14) not null,  
  brand              text,  
  inkNumber          text,  
  color              text,  
  retailPriceUSD     money,  
  primary key (IID)  
);
```

Ink Table Sample Data

Stored Procedures

Check Camera Price Update

This procedure checks to make sure that if a camera's price is updated the value is greater than zero dollars, and if it is not greater than zero dollars it replaces the value with the word 'Invalid'. This makes sure that a negative price does not enter the database, which could cause problems with other queries and views.

```
Create procedure check_camera_price_update()  
  returns refcursor AS  
  $body$  
  declare  
    ref refcursor;  
  Begin  
    IF (camera.retailPriceUSD < 0) THEN  
      update camera set camera.retailPriceUSD = 'Invalid' where  
camera.retailPriceUSD < 0;  
    End if;  
  End  
  $body$  
  Language plpgsql;
```

Triggers

Check Price

This trigger executes the check_camera_price_update procedure after an update on the cameras table is performed.

```
Create Trigger check_price  
After update on cameras  
for each row  
execute procedure check_camera_price_update ();
```

Security

The security on this database allows users to insert, update, and select data, but does not give them the ability to delete data.

The security on this database also allows administrators to delete data on top of insert, updating, and selecting data.

Users

```
Create User PhotographyUser with password 'photog';
```

```
Revoke all on Cameras from PhotographyUser;
```

```
Revoke all on Lenses from PhotographyUser;
```

```
Revoke all on Cards from PhotographyUser;
```

```
Revoke all on Printers from PhotographyUser;
```

```
Revoke all on Paper from PhotographyUser;
```

```
Revoke all on Ink from PhotographyUser;
```

```
Grant insert, update, select on Cameras to PhotographyUser;
```

```
Grant insert, update, select on Lenses to PhotographyUser;
```

```
Grant insert, update, select on Cards to PhotographyUser;
```

```
Grant insert, update, select on Printers to PhotographyUser;
```

```
Grant insert, update, select on Paper to PhotographyUser;
```

```
Grant insert, update, select on Ink to PhotographyUser;
```

Admins

```
Create user PhotographyAdmin with password 'prophotog';
```

```
Revoke all on Cameras from PhotographyAdmin;
```

```
Revoke all on Lenses from PhotographyAdmin;
```

```
Revoke all on Cards from PhotographyAdmin;
```

```
Revoke all on Printers from PhotographyAdmin;
```

```
Revoke all on Paper from PhotographyAdmin;
```

```
Revoke all on Ink from PhotographyAdmin;
```

```
Grant insert, update, delete, select on Cameras to PhotographyAdmin;
```

```
Grant insert, update, delete, select on Lenses to PhotographyAdmin;
```

```
Grant insert, update, delete, select on Cards to PhotographyAdmin;
```

```
Grant insert, update, delete, select on Printers to PhotographyAdmin;
```

```
Grant insert, update, delete, select on Paper to PhotographyAdmin;
```

```
Grant insert, update, delete, select on Ink to PhotographyAdmin;
```

Implementation Notes

To implement the database one first has to load all of the create table statements, then load all of the insert into statements, and then one can run all the reports, queries, and views that they would like.

Known Problems

The only known problem is that there is no column for sale prices of each item in case an item goes on sale and you want to see the retail price and the current sale price at the same time.

Future Enhancements

- To further enhance the database more views can be created to see how different information is related.
- More information about each product could also be included in the descriptions, including
 - Weight of lenses and cameras
 - Max paper sizes of printers
 - Average number of pages printed for each ink cartridge
